

The background image shows a vast container yard. In the foreground, a wide asphalt road with white dashed lines leads towards the stacks of containers. On the left, there are several tall stacks of orange and red containers. On the right, there are larger stacks of blue, red, and white containers. Several trucks are parked or moving within the yard. In the far background, a city skyline is visible under a bright, hazy sky with a few wispy clouds. A semi-transparent yellow banner with a black border is positioned across the top of the image, containing the title text.

Bahrain Imports Report: Insights from 2020 to 2023

Recommendation

My recommendation is to focus on Brazil more because they are the most imported country from and the value is less than China which are the highest in value not being in the top 5 countries that they imported.

Findings

- China has the most total spend value between all countries
- Brazil have the most quantity imported from
- highest number of commodity is in 2022
- while the lowest in commodity is in 2021
- most imported by quantity are OTHER ELECTRIC CONDUCTORS, FOR A VOLTAGE NOT EXCEEDING 1000 V
- Most category bought from Brazil is mineral products

Limitations

- The demographic of the country is not available
- import values is influenced by exchange rate fluctuation and inflation which make it difficult to compare across years.
- Comparability issues like change in policies, VAT, or new tariffs introduced.
- External factors like COVID-19, or oil prices not mentioned.
